

CVR Quarterly Letter – Q1 2017

We hope our investors will find the following CVR Quarterly Letter informative. Your feedback is welcome at info@cvmfunds.com.

Important Information

Before investing in CVR Dynamic Allocation Fund you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other important information is contained in the Fund's prospectus, a copy of which may be obtained by calling (855) 328-7691 or by visiting the Fund's website at www.cvmfunds.com. Please read the prospectus carefully before investing.

Performance (%)*

	Q1 2017	YTD	1 Year	Since Inception 12/30/13
CVRAX	5.32	5.32	15.47	3.47
HFRX Equity Hedge Index	2.70	2.70	5.90	0.63
S&P 500 Index	6.07	6.07	17.17	10.28

*Returns greater than one year are annualized

Expense Ratios (%)	Gross	Net** (what you pay)
CVRAX	2.33	1.65
CVRVX	2.58	1.90

Investment Minimums	Initial	Additional
CVRAX	\$100,000	None
CVRVX	\$2,500	\$100

Returns represent past performance and do not guarantee future results. Investment return and share price will fluctuate with market conditions, and investors may have a gain or loss when shares are sold. Mutual fund performance changes over time and currently may be significantly lower than stated above. For the most recent month-end performance, please call 855-328-7691. **The Adviser has contractually agreed to waive fees and/or reimburse expenses until April 1, 2018.

CVR Quarterly Letter – Q1 2017

The CVR Dynamic Allocation Fund (“the Fund”) is rule-based, unemotional and repeatable. Designed to capture equity returns in upward trending markets and to offer capital protection in down markets.

Q1 Commentary

The Federal Reserve signaled its confidence that the U.S. economy continues to strengthen by hiking interest rates in March for the second time since December. Equity markets picked up where they left off in 2016, advancing broadly during the first quarter. The Technology (+12.57%), Healthcare (+8.37%) and Consumer Discretionary (+8.45%) sectors led the advance. Failure by the Trump administration to dismantle Obamacare and pass new healthcare legislation led to more muted gains in the final weeks of the quarter as equity markets started to discount the possibility that President Trump may also fail to execute his pro-growth economic reforms.

The CVR Dynamic Allocation Fund returned +5.32% during the first quarter vs its benchmark, the HFRX Equity Hedge Index, which returned +2.70%. The S&P 500 returned +6.07% over the same period. The Fund’s equity risk models maintained a risk-on stance throughout the first quarter. The Fund benefited from overweighting Consumer Discretionary and underweighting Energy during the quarter.

As a reminder, the CVR Dynamic Allocation Fund provides:

- Historically Less Risk than the S&P 500
- Unconstrained Equity Upside Potential
- Systematic Capital Protection

We are pleased to announce that our Institutional Share Class (CVRAX) is now available at Fidelity/NFS on the Non-Transaction Fee (“NTF”) platform (and continues to be available on the Transaction Fee (“TF”) platform).

We remain confident in our investment process and steadfast in our commitment to delivering long term equity returns with less risk than the market.

Sincerely,

Peter Higgins & Bill Monaghan
Founders

Risk Disclosure

All investing involves risk including the possible loss of principal. There can be no assurance the Fund will achieve its investment objectives. In addition to the general risks of investing, the Fund is subject to additional risks including commodities risk, derivatives risks, ETF risk, risks of foreign investing and model and data risks. Exposure to the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Derivatives, such as options, futures and swaps, can be volatile, and a small investment in a derivative can have a large impact on the performance of the Fund as derivatives can result in losses in excess of the amount invested. Shares of an ETF may trade at a premium or discount to the net asset value of its portfolio securities. Foreign investments may be subject to additional risks, which include international trade, currency, political, regulatory and diplomatic risks, which may affect their value. Given the complexity of the investments and strategies of the Fund, the Adviser relies heavily on quantitative models and data supplied by third parties. Models and Data may prove to be incorrect or incomplete and expose the Fund to potential risks. Please see the prospectus for a complete discussion of the Fund's risks.

Standard Deviation is a measure of the dispersion of a set of data from its mean. Beta is the measure of a fund's relative volatility as compared to the S&P 500 Index. Beta attempts to measure the relative risk. A Beta rating above 1.0 indicates greater volatility than the market. A Beta rating below 1.0 indicates lower volatility than the market. **Sharpe Ratio** is a risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance. **R-Squared** is the measure of percentage movement of a fund compared to the S&P 500 Index. A high R-Squared (between 85 and 100) indicates the Fund's performance patterns have been in line with the Index. **The S&P 500 Total Return Index** is a market capitalization-weighted index of 500 large-capitalization stocks commonly used to represent the U.S. equity market. All returns reflect reinvested dividends and capital gains distributions. One cannot invest directly in an index. **Liquid Alternatives** are any nontraditional asset with potential economic value that would not be found in a standard investment portfolio and trades with daily liquidity.
